

# ShoeSelect™

## Photos and Videos and More

The ShoeSelect™ is an electric, motor-driven, vertical carousel. Units are available so that they can be installed with the lowest shelf at a comfortable reachable level OR we also offer floor to ceiling models thus allowing for MAXIMUM use of space. A ShoeSelect™ is a great way to take advantage of unused storage space in the high ceilings of the bedroom closet!!

--- A vertical conveyor or carousel as a storage medium for shoes has many advantages:

- NO Bending
- NO Stooping
- NO Stretching
- NO Climbing
- NO getting a ladder

--- Features that are available with automated shoe storage from StorageMotion are as follows:

-

Patent pending guide system that keeps the shoe shelves level as they move from front to back and back to front as they go around.

-

Suspended floating shelves that are quiet and safe as they travel.

-

Shoes are tilted within the shelves for easier visibility and greater display. Side by side shoe storage shelves and shoebox style shoe shelves are available.

-

Many Control options including remote control

-

Modular set up that includes multiple units that can have individual, group and master level operation. This allows shoes to be organized vertically by type and horizontally by color.

- Home positioning is available. This means it is possible to have a home position where you can rotate the shelves and they will automatically stop at home position. This allows for a consistent storage position to be found every time you access the unit.

- Carousel units are available that are half the ceiling height or go completely from floor to ceiling (custom). With a floor to ceiling unit you can even place stationary storage in front of the unit up to the access point to gain even more storage. Three columns of shoes that TRIPLE your storage

The ShoeSelect™ is available as a closet or cabinet "insert". It comes fully assembled with natural Baltic birch shelves that have a high gloss clear polyurethane finish. The container is MDF painted black which is then slid into an existing closet system and requires just a few screws to hold the unit in place. The unit must be fully supported at the bottom and cannot be just hung on the wall. It can also be installed in a modular side by side or one on top of each other fashion in order to store hundreds of shoes.
