
The Automated WardrobeLift™

Photos and Videos and More

The Automated WardrobeLift™ has two rotating arms that work in tandem to lower your clothing down to you! Each rotating arm is motor driven and there is a single simple control switch for up or down. The arms rotate down in about ten seconds and can easily support up to 80 lbs!! A clothes rod up to four feet long can be suspended between the two arms and the motor is neatly hidden in a two inch diameter tube that acts as a drive system for the rotating arms. An enclosure can also be created for the motor tube for an even more high end look.

We offer:

- Wood lifts that are available in a variety of popular, hard woods
- Metal/polymer lifts that resemble traditional wardrobe lifts except that they are motor driven
- Custom lifts that allow triple hang and can span more than 4 feet
- Remote control that can include individual, group and master control.
- Wireless wall switches
