

# Customization

## Summary for Customization on Carousels

1) We currently have carousels that fit into 18 inch, 24 inch and 34 inch deep cabinets. The 34 inch deep carousel is for folded clothes and shoes that can be laid flat. (The minimum actual carousel depths not including a switch is 16 1/2, 22 1/2 and 32 1/2) Changing depth outside of these 3 basic depths (18, 24 and 34) is NOT easy so we try to find a solution that fits these depths.

2) We can support widths up to 32 inches for the 18 inch deep, 40 inches for the 24 inch deep, and 48 inches for the 34 inch deep. Anything outside these dimensions requires additional testing and analysis. Changing height is easy but need to keep under 12 feet due to restrictions in our factory.

### 3) Possible custom shelf sizes.

18 inch deep carousel - approx 6 inch deep shelves with 6, 7, 8 inch spacing

24 inch deep carousel - approx 8 inch deep shelves with 10, 11, 12 inch spacing

34 inch deep carousel - approx 13 inch deep shelves with 9, 10, 11, 12, 13, 14 inch spacing

### 4) Shelf spacing and number of shelves determine overall carousel height. (Spacing of shelves must be on the inch)

Shelves can be made out of any material but we try use Baltic Birch because it is fairly light in weight.

Weight capacity guidelines are as follows

18 inch deep carousel - 15 lbs

24 inch deep carousel - 20 lbs

34 inch deep carousel - 25 lbs

The above capacities MAY be able to be increased in certain situations

### 5) In certain situations we let customers build their own shelves. We supply example shelves and drawings.

6) Only shelves are finished for a customized product. The carousel enclosure we do not finish. Customer must finish themselves and add trim to match rest of interior.

#### 7) Controls -

We have regular momentary switch On -Off -On that comes in a basic external enclosure BUT for best appearance needs to be installed by an electrician.

Remote - Have this capability along with individual, group and master control. This means that multiple carousel units can be controlled at same time.

#### Summary for Customization on Wardrobe Lifts

Wood Arms are normally unfinished oak and motor tube is flat black. Can make out of any sturdy wood including MDF and can have finished for a fee. Can also paint motor tube any color in order to blend in with customers closet or finish with special veneer to give it a wood grain appearance.

#### Completed Customizations

1) Large 11 foot tall wardrobe carousel. Holds 18 shelves for folded clothes and mens shoes.

2) Special carousels that hold up to 68 two liiter plastic bottles.

3) Remote control carousel for a showroom that holds shelves for both Shoes and Pantry items. Same remote also controls an automated wardrobe lift in the same display.

4) Wine Bottle carousel.

5) 4 pole vertical hanging clothes carousel (in progress)
